Database Management System (DBMS)

Previous Year Question Paper – 2016
Time: 3 Hours Maximum Marks: 100

Note: This is a sample/dummy placeholder question paper generated for demonstration purposes only. It does not represent an official examination paper. Some questions repeat across years with different wording, as is common in real previous-year question compilations.

Section A – Short Answer Questions (Answer any 5)

Q1. Define DBMS. Differentiate between DBMS and File System. *(5 marks each)*

Q2. Explain the concept of Data Independence with suitable examples. *(5 marks each)*

Q3. What is normalization? Explain 1NF, 2NF, and 3NF with examples. *(5 marks each)*

Q4. Describe the ACID properties of a transaction. *(5 marks each)*

Q5. What is a primary key? How is it different from a candidate key? *(5 marks each)*

Section B – Medium Answer Questions (Answer any 4)

Q1. Explain the different types of keys used in a relational database with examples. *(10 marks each)*

Q2. What is an ER diagram? Design an ER diagram for a Library Management System. *(10 marks each)*

Q3. Discuss the concept of functional dependency and its role in normalization. *(10 marks each)*

Q4. Explain the difference between DDL, DML, and DCL commands with examples. *(10 marks each)*

Section C – Long Answer Questions (Answer any 3)

Q1. Design a relational schema for a Hospital Management System. Identify entities, attributes, and relationships. Convert the ER diagram into relational tables. *(15 marks each)*

Q2. What is concurrency control? Explain any two concurrency control techniques used in DBMS. *(15 marks each)*

Q3. Design an ER diagram and relational schema for an Online Shopping System. Include entities such as Customer, Product, Order, and Payment. *(15 marks each)*
