Database Management System (DBMS)

Previous Year Question Paper – 2019
Time: 3 Hours Maximum Marks: 100

Note: This is a sample/dummy placeholder question paper generated for demonstration purposes only. It does not represent an official examination paper. Some questions repeat across years with different wording, as is common in real previous-year question compilations.

Section A – Short Answer Questions (Answer any 5)

Q1. What is a trigger in SQL? Give a suitable example. *(5 marks each)*

Q2. Define serializability. Why is it important in transaction management? *(5 marks each)*

Q3. What is denormalization? When is it used? *(5 marks each)*

Q4. Explain the SELECT statement with GROUP BY and HAVING clauses. *(5 marks each)*

Q5. What is an ER diagram? Explain its basic components. *(5 marks each)*

Section B – Medium Answer Questions (Answer any 4)

Q1. What is a stored procedure? How is it different from a function in SQL? *(10 marks each)*

Q2. Discuss the two-phase locking protocol used for concurrency control. *(10 marks each)*

Q3. Explain the concept of data warehousing and its relation to DBMS. *(10 marks each)*

Q4. Explain the architecture of DBMS (Three-Schema Architecture) with a neat diagram. *(10 marks each)*

Section C – Long Answer Questions (Answer any 3)

Q1. Discuss distributed databases. Explain their advantages and challenges. *(15 marks each)*

Q2. Design a relational schema for a Hospital Management System. Identify entities, attributes, and relationships. Convert the ER diagram into relational tables. *(15 marks each)*

Q3. What is concurrency control? Explain any two concurrency control techniques used in DBMS. *(15 marks each)*
